

# Revisions for 2010

## Clarification of Definitions

- A note has been added to the oxygen items on the 28 Day Form and Discharge Form for the items listed below: Note: 21% oxygen is room air. This is not considered supplemental oxygen, no matter how administered.
  - Initial Resuscitation, Oxygen, Item 15a.
  - Oxygen on Day 28, Item 18.
  - Respiratory Support after Leaving DR, Oxygen, Item 21a.
  - Oxygen at 36 Weeks, Item 25.
  - Oxygen at Discharge, Item 46a.
- The note for Item 16a, Temperature Measured within the First Hour after Admission to Your NICU, has been clarified to indicate that, if the infant's temperature is lower or higher than the thermometer will record, record the lowest or highest reading on the thermometer.
- The definition of Coagulase Negative Staph, Item 40a on the Discharge Form has been clarified to read "One or more signs of generalized infection ..." The definition had read "Signs of generalized infection ...".
- The definition of major birth defect, Item 44 on the Discharge Form, has been modified to clarify that cystic fibrosis is not a major birth defect.

## Surgery Code Changes

New Surgery Codes (do not use these codes for infants born prior to 2010):
